

Knowledge	 High level knowledge of an archaeological specialism and/or archaeological method and theory High level knowledge of research ethics and key legislation associated with archaeological practice Knowledge of research design, data collection, interpretation, reporting, archiving and FAIR principles Record of publication appropriate to audience and career stage. Eg dissemination via social media and blogs and/or traditional methods
Autonomy	 Can design effective and rigorous small scale research projects Supports and manages inter disciplinary research teams and/or novice and early career researchers Conveys knowledge in technical and non-technical formats to a broad audience Collaborates with peers to review and develop research agendas and frameworks
Coping with complexity	 Manages timetables, budgets, where applicable, and resources to deadlines Prioritises research projects and outputs eg with competing needs of funders, host institutions and project leads Can incorporate multi-disciplinary strands of evidence Contributes to the design and delivery of effective teaching, learning and training for diverse audiences Can recognise and resolve potential conflicts of interest within an established framework
Perception of professional conduct	 Use of effective teaching and training methods, which can include mentoring and coaching to support and develop research team members, where appropriate Effectively promotes the values and influence of the profession including the values of the Institute Outline personal contributions to successful funding applications for research projects Understanding the impact of research project outcomes and contributions to archaeological or community practice Understands the ethical requirements of the Code of conduct and uses them to guide and review own practice and, where applicable, that of others

Knowledge	 Substantial knowledge of an archaeological specialism with ability to convey that knowledge to the peer-review community at both a national and international level as well as the wider public Substantial knowledge of research ethics and key legislation relevant to your country/ field Demonstrates substantial knowledge of research design, data collection, interpretation, reporting and archiving through leadership of research projects, grant applications and FAIR principals Demonstrates a record of publication of research articles and primary data, as lead author where appropriate. Eg dissemination via social media and blogs and/or traditional methods. Should have some form of peer review
Autonomy	 Manages and leads current (and recent) successful applications for contracts and funding bids for large scale research led projects Develops the principles and skills of effective training and quality assurance with research team members, where applicable Creates and leads teams from across the community of practice (public, private and third sectors) to review and develop research agendas and frameworks Effectively applies strategies for engaging audiences and client groups in research design and/or delivery and dissemination

Please go to the next page for Coping with complexity and Perception of professional context

Coping with complexity	 Manages and balances the competing needs of teaching, research and administration as required by the individual host organisation Can adapt and tailor teaching, training, coaching or mentoring practice in response to resources available, audience needs, and current concepts Collaborates with others in the field and contributes to large-scale projects and incorporation of multi-disciplinary data Can manage and effectively resolve conflicts of interest and competing priorities of funders, research project partners and other stakeholders
Perception of professional conduct	 Application of effective teaching, training and development at a variety of scales. Uses effective quality assurance systems of the impact of teaching, training and development on intended audiences and/or client groups Demonstrates understanding of the significance of research projects and the potential reach and actual impact of research project outcomes on audiences and/or client groups at regional, national and international scales Effectively promotes the values and influence of the profession including the values of the Institute Outline the impact of research projects and outcomes on business and/or institutional performance Demonstrates professional judgement and ethical behaviour across a wide variety of complex situations, supporting and encouraging others to do the same

Those applying at Practitioner (PCIfA) should use the main competence matrix.
